

STREAMLINING THE PROJECT LIFE CYCLE

Audubon Companies provides end-to-end owner's engineering services for onshore and offshore projects. Using an integrated, collaborative, team approach, we build trust, transparency and strong connections between the owner, contractors and financial stakeholders. We work as a single expert, either within your team or as your standalone team, to ensure the complexity of your projects is mastered and managed. From pre-feasibility through to design, operations and maintenance, our owner's engineering services provide the right resources and tools during each project phase.

Capitalizing on our project oversight experience, our processes are tailored to fit the needs of our clients, delivering each project on time and to the highest standard. As your trusted partner, we bring extensive engineering expertise across all technical areas, including front-end engineering design (FEED), contract negotiation, detailed engineering, procurement, construction, commissioning and startup.

Capabilities

- Project Management, Multi-Disciplinary Engineering, Environmental & Project Controls Services
- Technical Reviews
- Facility Design, including Process-Related Aspects & Technology Selection
- Facility Features & Auxiliary Systems
- Environmental Design, Civil Works, Electrical Infrastructure, Controls Systems, Mechanical Systems, Telecommunications, and Site Security
- Environmental & Regulatory Permitting Facilitation
- FERC, USCG, DOT, USAC Filing Support

The Audubon Advantage

- Extensive Expertise with Professional Project Support & Management
- Comprehensive Consulting Services in all Project Phases
- Risk Minimization of Budget Overruns, Environmental Issues, Procedural Claims, Quality Issues & Non-Deliveries
- 18 Million Safe Man-Hours Worked
