

PROJECT PROFILE

PECAN ISLAND FIELD

DEVELOPMENT PROJECT

Client: **FREEMPORT-MCMORAN**

Location: **PECAN ISLAND FIELD, VERMILION PARISH, LOUISIANA**

Audubon provided [project management](#) and [construction management](#), coating inspection, and I&E inspection on the [Pecos platform](#), a single-level 48-foot caisson deck with a heliport. The facility was engineered to flow 15 million standard cubic feet per day (MMSCFD) of oil and manage 400 barrels of condensate.

The scope of work also included the [procurement](#) and cost tracking on all phases of the project. The team installed a 6 in. pipeline running from Pecos to Harvest SL-3763. The project team also added a new separator on the Harvest platform to manage production from the Pecos platform and oversaw the offshore installation of the separator, pipeline, caisson deck, and helideck.

Project Overview

- Single-level 48ft. caisson deck with a heliport
- 6 in. pipeline approximately 6 miles long
- Oversight of the caisson deck, helideck, separator, & pipeline installation
- 15 MMSCFD
- 400 barrels of condensate

Scope of Work

- Project management
- Construction management
- Coating inspections
- I&E inspections
- Procurement & cost-tracking
