

PHMSA Mega Rule Solutions

Did you know?

Over 425,000 miles of onshore transmission and gathering pipelines are subject to the Mega Rule—are your pipelines in compliance?

The Pipeline and Hazardous Materials Administration (PHMSA) Mega Rule is complete. Codified in 49 CFR 192 and 195, the regulations were developed over years of study and collaboration in response to the increasing risks posed by high-pressure, large-diameter pipelines to human safety and the environment. Gas and liquids pipelines have new requirements for records and verification, inspection and testing, incident prevention and response, and emergency planning.

Pipeline integrity services for regulatory compliance and asset protection

Audubon Companies addresses pipeline Mega Rule compliance with decades of pipeline integrity experience, thorough knowledge of PHMSA regulations, and leading data management technologies. Committed to zero incidents, precise data management, and optimal asset life, our team can help you achieve regulatory compliance—while increasing pipeline safety, reducing risk to your infrastructure and the environment, and improving operational performance.

Data + reporting

- › TVC records
- › Material properties + attributes
- › Sampling plans
- › Annual reports + filing
- › Jurisdictional determination
- › Data integration
- › GIS management

Prevention + response

- › External + internal corrosion control
- › Cathodic protection design-installation-testing
- › Leak detection
- › Damage analysis
- › Safety audit support
- › Make-piggable program
- › Repair-replace-shutdown
- › AC/DC interference management
- › Weather event response

Inspection + testing

- › Direct + indirect assessment
- › ECA + ECDA
- › In-line inspection
- › Cyclic fatigue analysis
- › NDE
- › Material verification
- › MCA/HCA analysis + confirmation
- › MAOP confirmation
- › EFRD analysis
- › Pig tracking
- › Gap analysis
