

Offshore Solutions

Agile, turnkey execution across the entire offshore value chain:

Deep water

- › Semisubmersibles
- › Spars
- › Floating production/storage + offloading (FPS/FPSO) vessels
- › Tension leg platforms

Shallow water

- › Production + storage
- › Concrete + steel piles
- › Fixed production
- › Saltwater disposal
- › Offloading + transport
- › Flare + vapor disposal
- › Pipelines

Delivering the future of energy with multidisciplinary, full-lifecycle expertise

Audubon Companies brings expert engineering, procurement, construction management (EPCM), fabrication, and technical field services to the offshore oil and gas industry. From concept to project delivery, we incorporate the latest subsea and subsurface technologies with data-driven insights to deliver sustainable offshore solutions that align with your business objectives.

Whether developing greenfield assets or retrofitting or optimizing existing infrastructure, Audubon has the experience and expertise to improve operations, enhance performance, and extract maximum value from your investment. Audubon's integrated engineering services span the asset life cycle, from scoping and feasibility studies to detailed design and technology selection to commissioning, operations, and maintenance:

- › Concept + feasibility
- › Front-end engineering
- › Detailed design
- › Automation + controls
- › Due-diligence
- › Permitting + compliance
- › Process safety + risk
- › Commissioning

Smart solutions for the deepest challenges

Collaborating with you at every phase, we combine our experience, technical proficiency, and technological capabilities into a custom solution—designed precisely to solve your complex challenges and achieve your unique objectives. The Audubon team has designed and executed on some of the world's most important offshore assets. For our clients, our rich experience, multidisciplinary knowledge, and built-in flexibility translate to safe, efficient, reliable project delivery.

Maximizing brownfield performance + asset life

Audubon knows the value of existing vessels and platforms. And we have trained resources ready to deploy for your project. Prioritizing design precision and budget optimization, we turn risks into efficiencies and challenges into opportunities. Whether a turnkey upgrade or full portfolio management, let us get the most out of your aging assets.

- › Repairs, maintenance, modifications
- › Project + cost controls
- › Construction management + inspection
- › Power regeneration
- › Fabrication + installation
- › Decommissioning
- › Facility + program management
- › Full portfolio management
